

DR. BRETT BRAZEAL, D.D.S.
5948 Warner Ave., Huntington Beach, CA 92649

ROOT CANAL THERAPY INSTRUCTIONS

1. The anesthesia will often last for an hour to two after treatment, be sure to avoid chewing on the numb side to prevent accidental cheek or tongue biting.
2. Avoid chewing on the tooth that was treated until the final crown is placed.
3. It is normal to have soreness and some pain in the tooth that was treated. We recommend Advil (400-800mg) or Tylenol (500-1000mg) taken up to 4 times/day if Dr. Brazeal did not give you a prescription.
4. If Dr. Brazeal gave you an antibiotic prescription, be sure to take it according to instructions until you have finished all the pills.
5. The temporary filling can sometimes wear down a bit, which is normal. But if the filling comes out, please return as it should be replaced to prevent any chance of reinfection.
6. Please call us at **(714) 846-1414** if you have any questions or concerns. You can also email to office@seabreezedental.com.
